Just a few weeks before the opening of COP 28, **France 24** focuses on those who are on the front lines of climate change.

From Kenya to Panama, via Greenland and Australia, **France 24's** reporters **James André** and **Achraf Abid** meet the indigenous peoples who live in harmony with nature and whose daily lives are disrupted by climate change.

**Episode 1 – With the Turkana when drought kills – Aired on 21<sup>st</sup> of October – [To be \(re\)watched HERE](#)**

**March 2023.** After suffering from endless drought for five years, the Turkana people see their land cracking and their livestock decimated. Living in the arid lands of Northwest Kenya, these nomadic shepherds live in harmony with nature, alternating between dry and rainy seasons. However, to face this disruption, the Turkana are forced to adapt their habits and turn to fishing in the vast salt lake that borders their lands. **Photo Credit © Achraf Abid**

**Episode 2 - With the Inuit when the ice melts – Airs on October the 28<sup>th</sup>**

**May 2023.** In the most isolated village in Greenland, **Ittoqqortoormiit**, the ice is melting slowly. 25 km of ice is now missing. A significant change for seal and polar bear hunters, who are now replacing their sled dogs with motorboats. But the Inuit people also see in the melting of glaciers new possibilities for hunting and for welcoming tourism. **Photo Credit © Achraf Abid**

**Episode 3 - With the Aboriginal Australians when the bush burns – Airs on November the 11<sup>th</sup>**

**June 2023.** In Australia's Northern Territories, the bushfire season has just started. The Aboriginal people of Arnhem Land are using their ancestral practice of controlled burning to prevent mega-fires. This millennia-old tradition is passed on through families and is now of great interest to authorities, following the trauma of the devastating Black Summer bushfires in 2019-2020. **Photo Credit © Achraf Abid**

## Episode 4 – With the Guna when the oceans rise – Airs on November the 18<sup>th</sup>

**September 2023.** In the San Blas archipelago off the coast of Panama, the island of **Carti Sugdub** is suffering from rising waters. Scientists have forewarned that, by the year 2100, it may progressively drown in the Atlantic Ocean. The Guna people, a community of 1200 residents, find themselves in a poignant predicament as their ancestral lands stand inundated. With water already lapping at their feet, they embark on a journey to relocate to a new village on the mainland. **Photo Credit © Achraf Abid**
